8.7. Earthworks

8.7.1 Control of Vegetation in Rock Cuttings

Ideally shrubs and small trees growing on the sides of rock cuttings should be removed before they grow to a height of 30cm.

This is to minimise the risk of rocks and other debris becoming dislodged by growth and falling down and fouling the track.

8.7.2 Reference Document

Refer to ARTC Appendix ETC-08-02 for Earthworks.
